# Put TI Quick Budget on your home screen

Once it's on your home screen it opens full screen like any other app, works without cell signal, and keeps your budgets on your own device.

OPEN THE APP

**https://falkbuiltlance.github.io/ti-budget/daw/**

Reading this on the phone you want to use? Tap the link. On another device? Point the camera at the code.

## iPhone & iPad

SAFARI

1. Open the app link in Safari.
2. Tap the three-dot button next to the address bar, then tap Share. (On older iPhones, tap the Share icon, a square with an up-arrow.)
3. Scroll down and tap Add to Home Screen.
4. Leave Open as Web App switched on, then tap Add.

## Android phone or tablet

CHROME

1. Open the app link in Chrome.
2. Tap the three-dot menu at the top right.
3. Tap Add to home screen, then Install. Some phones say Install app instead.
4. Samsung Internet: tap the menu, then Add page to, then Home screen.

## Windows PC

EDGE OR CHROME

1. Open the app link in Edge or Chrome.
2. Edge: three-dot menu, Apps, Install this site as an app.
3. Chrome: click the install icon at the right end of the address bar, or three-dot menu, Cast, save and share, Install page as app.
4. To keep it handy, right-click its taskbar icon and choose Pin to taskbar.

## Mac / MacBook

SAFARI OR CHROME

1. Open the app link in Safari or Chrome.
2. Safari (macOS Sonoma or later): File menu, Add to Dock, then Add.
3. Chrome: three-dot menu, Cast, save and share, Install page as app.
4. It opens in its own window and shows up in Launchpad and Applications.

## Got the QR code on the same phone you want to use?

A camera can't scan its own screen, so use one of these instead:

| | |
|---|---|
| **Easiest** | Tap the blue link in this guide or in the email. It opens the app directly. |
| **iPhone or iPad** | Touch and hold the QR code picture in Mail, Messages or Photos, then tap the link that pops up. If it's in a PDF or a website, take a screenshot first, open it in Photos, and tap the QR code (or the small scan button in the corner). |
| **Android** | Take a screenshot, open it in Google Photos and tap Lens, then tap the link. On newer phones you can also hold the home button or bar and circle the code (Circle to Search). |

## Using the app

1. Enter the project name, address and who it's for. Add your own name and phone once under Prepared by; the app remembers it on this device.
2. Name the first area and enter its square footage.
3. Slide to a cost per square foot ($25 to $400). Need an exact or higher number? Type it in the box.
4. Tap Add Area for each additional floor or space. Use Additional Cost for lump sums like permits or after-hours work.
5. Set Contingency and the ± Budget range (both start at 10%). Set either to 0 to leave it off the summary.
6. Open Summary. Tap the sheet to hide the buttons for a clean screenshot, or tap Share PDF, then Tap to send, to text or email a PDF.

### Good to know

- Your budgets and contact info stay on your device. Nothing is sent anywhere unless you share it.
- The app keeps your current budget when you close it. New budget (tap twice) starts fresh.
- Updates arrive automatically the next time you open the app with a connection.
- Pricing shown is a rough order of magnitude (ROM) for planning, refined as design details are finalized.
